

pato

Simple but with a certain sophistication that distinguishes the outstanding from the mundane. This is the spirit in which pato had been developed.

Pato, a flower trough in a captivating stylistic shape – simple yet not too dominant. Pato is particularly showing to advantage when in rows and combined with other troughs. It is a very robust element and therefore well prepared to withstand the various environmental and climatic impacts.

pato

Seven different flower troughs of thin-walled glass fibre concrete. Design options with high-class, natural colour pigments that are mixed into the matrix. The glass fibre concrete is not only supplied with a colour but is also imbued.

Supplied with galvanized metal insert.
