

shorty

With the concept for the shorty the designer is moving about border areas. Thin as paper with clear and precise lines and yet strong and solid.

Shorty shows a clear contour. The flexible steel leg emphasizes its lightness and makes it even floating. Gentle swaying movements make you forget sitting on such a heavy and massive piece of furniture. Pieces of furniture made of glass fibre concrete are fine, yet rough chaps. They are timeless objects that people still will be fond of after years.

shorty

Filigree chair of glass fibre concrete with a leg of sheet steel. It can be particularly well combined with the shorty and the tabloo. Design options with high-class, natural colour pigments that are mixed into the matrix. The glass fibre concrete is not only supplied with a colour but is also imbued.

Available colours

- Dark-grey
- Anthracite
- Concrete-grey
- Cream-white

Weight

64 kg
